Answer: C

An administrator would like to get notified by email of unusual behavior related to permission changes on their corporate file shares.

How would the administrator configure File Analytics to receive notifications in a timely fashion?

- A. Set Ransomware Email Recipients
- B. Define Anomaly Rules
- C. Configure Events Quotas
- D. Create an Alert Policy

Answer: B

The administrator creates the S3 bucket as the backup target. While creating the Nutanix Objects endpoint to the newly created S3 bucket, the following error is observed:

Method Not Allowed: An object from the object-lock enabled bucket can not be modified or deleted unless the retention period is elapsed.

What is the most likely cause?

- A. The S3 bucket name is incorrect.
- B. The API key is not configured correctly.
- C. Object-Level permissions are incorrect for GET, HEAD, and PUT bucket-level permissions.
- D. Write Once Ready Many (WORM) is enabled on the S3 bucket.

Answer: D

An administrator is tasked with upgrading Objects Manager to the latest release that came out earlier in the week.

The administrator has navigated to the LCM page in Prism Central and does not see the latest version of Objects Manager as an available upgrade,

What is the likely reason the administrator does not see the current release of Objects Manager as an available upgrade?

- A. Prism Central needs to be scaled out.
- B. An LCM inventory has not been performed.
- C. The administrator is logged in as local admin rather than a domain admin.
- D. The administrator needs to perform the upgrade through Prism Element.
